DINO-MITE DAY AS GEORGE TOMLIN- SON PUPILS DISCOV- ER T-REX

In a shocking revelation today, the pupils at George Tomlinson were surprised and bewildered to find that dinosaurs are not, in fact, extinct. A live, adolescent Tyrannosaurus Rex (T-Rex) was initially discovered by Nursery and Reception pupils around 9:00am at the school.

“I found some dinosaur fossils!” commented Arthur from Reception Otters class, still clutching on to his archaeological findings. The students from the Early Years had begun to suspect something was amiss when they discovered fossils in their classrooms. The fossils, which were identified as coming from a real-life dinosaur, were thousands of years old.

Later on in the day, Key Stage one and Key Stage two children discovered the colossal beast (approximately 8ft tall, 3.5 ft wide and 17ft long), which made a huge impact on pupils during their afternoon assembly.

After having read and researched dinosaurs when younger, the children at George Tomlinson were well-equipped to deal with the vertebrate, which they knew was carnivorous.

rous.

“Perhaps most shocking of all,” began Miss Carter, the Head Teacher, “was that the animal was in actual fact, not the vicious predator we had expected.”

The Tyrannosaurus Rex, which is believed to be one of the deadliest beasts from the Jurassic Period, was surprisingly calm, and caring. “If anything, the beast seemed to be intrigued by the pupils here” commented Chloe Alder, the Deputy Head. It is widely believed that the sole reason for the dinosaur’s placid behaviour was simply due to the wonderful atmosphere within George Tomlinson Primary School, and the caring nature of the children there.

The T-Rex, thought to be the only one in existence, has now since disappeared. “I hope we see him again one day!” commented Aisha, a pupil in 3 Cleopatra class.

The children squeal in delight as they regard the large beast.
